

Table of Contents

The Societal Relevance of Paleoenvironmental Research	
1.1 Introduction	1
1.2 A paleo-perspective on earth system function	4
1.3 Past climate variability, human societies and human impacts	5
1.3.1 The Anthropocene	5
1.3.2 Societal responses to past climatic change	6
1.3.3 Decadal-centennial modulation of modes of climate variability	7
1.3.4 Vulnerability to extreme events	7
1.4 Hydrological variability	7
1.5 Ecosystem processes	8
1.6 Landcover change	9
1.7 Biodiversity	9
1.8 Testing climate models with paleodata	10
1.9 A paleo-perspective on future global change	10
The Late Quaternary History of Atmospheric Trace Gases and Aerosols: Interactions Between Climate and Biogeochemical Cycles	
2.1 Introduction: anthropogenic and natural changes	13
2.1.1 Greenhouse gases	14
2.1.2 Aerosols	14
2.2 The significance of past atmospheric records	15
2.2.1 Aerosol incorporation and gas occlusion in ice	15
2.2.2 How reliable are the climate records obtained from ice cores?	16
2.3 Glacial-interglacial cycles	18
2.3.1 Greenhouse gases	18
2.3.2 Aerosols and DMS	20
2.4 Abrupt climatic changes during the last ice age	21
2.4.1 CH ₄ variations	21
2.4.2 N ₂ O variations	24
2.4.3 CO ₂ variations	26
2.4.4 Dust	26
2.5 The Holocene	27
2.5.1 CH ₄ variation over the Holocene	27
2.5.2 CO ₂ increase over the Holocene	28
2.5.3 The Holocene N ₂ O level	28
2.6 The last millennium	28
2.6.1 Greenhouse gases	28
2.6.2 Aerosols	30
Pre-industrial	30
Anthropogenic increase	30
2.7 Conclusions, a view in the context of future changes	31
The History of Climate Dynamics in the Late Quaternary	
3.1 Introduction	33
3.2 Climate change under orbital forcing	34
3.2.1 Developing a chronology of past climatic change	34
3.2.2 Understanding glacial cycles	36
3.2.3 Glacial inception	39
3.2.4 The Last Glacial Maximum	40
3.2.5 Glacial Termination	42
3.3 Interaction among climate system components on millennial time scales	44
3.3.1 Millennial scale variability in proxy data: high latitude signals	44
3.3.2 Millennial variability of climate at low latitudes	47
3.3.3 Modeling millennial scale climate variability	50
3.4 Climate modes on interannual to centennial scales	52
3.4.1 The tropical Pacific: El Niño/Southern Oscillation	53
ENSO in recent centuries	53

ENSO in the late Quaternary	55
ENSO in the mid-Holocene	55
3.4.2 Decadal variability in the extratropical Pacific	57
3.4.3 North Atlantic Oscillation	59
3.4.4 Tropical Atlantic: the dipole and extratropical links	60
3.4.5 Global teleconnectivity	61
The Late Quaternary History of Biogeochemical Cycling of Carbon	
4.1. Introduction	63
4.2. Continental processes and their impact on atmospheric CO ₂	64
4.2.1 Biospheric carbon	64
4.2.2 Soil carbonate	67
4.2.3 Weathering and river transport	68
4.3 Marine processes that affect atmospheric CO ₂	68
4.3.1 Air-sea flux	68
4.3.2 SST and SSS control (the solubility pump)	69
4.3.3 Removal of ΣCO ₂ from surface waters by sinking C _{org}	69
4.3.4 Supply of carbonate ions to surface waters (the alkalinity pump)	71
4.3.5 The export ratio (biological versus alkalinity pumps)	72
4.4 Impact of marine processes on atmospheric CO ₂	72
4.4.1 Contribution from the solubility pump	72
4.4.2 Global export of ΣCO ₂ from surface waters	72
Changes in N and P supply in oligotrophic regions	72
Changes in Fe supply in HNLC regions	73
Changes in Si supply	76
4.4.3 Global rate of supply of ΣCO ₂ to surface waters	76
4.4.4 Contributions from the alkalinity pump	76
4.4.5 Contributors to transient excursions in atmospheric CO ₂	77
4.5 Summary and critical areas for future research	78
Terrestrial Biosphere Dynamics in the Climate System: Past and Future	
5.1 Introduction	81
5.2 The roles of the terrestrial biosphere in the climate system	82
5.2.1 Biogeochemical roles	83
5.2.2 Biophysical roles	84
5.3 Terrestrial biosphere changes in the past	86
5.3.1 Response of the biosphere	87
Growth and/or death	87
Species migration	87
Changes in community composition	87
Changes through evolution	88
Extinction	88
5.3.2 The temporal hierarchy of climate change and biospheric response	89
The tectonic frequency band	89
The “Orbital” frequency band (1 million to 10,000 years)	90
The millennial frequency band (10,000 to 1,000 years)	93
Sub-millennial frequency bands (<1000 years)	93
5.3.3 The roles of changing disturbance regimes and atmospheric CO ₂	93
Disturbance as an agent of change	93
The direct effects of changing atmospheric CO ₂ concentrations	94
5.4 Terrestrial biosphere change of the future: out of the envelope and into a world of disequilibrium	94
5.4.1 Future climate change	94
5.4.2 Future biosphere change	95
5.4.3 The need to focus on the transient response	95
5.4.4 More complicating factors	99
5.5 Conclusions and future research needs	100
5.5.1 The problem with biosphere feedbacks and climate sensitivity	100
5.5.2 Implications for future biodiversity conservation	100
5.5.3 Principal uncertainties and research imperatives	102

5.5.4 The final word	102
5.6 Acknowledgements	103
The Climate of the Last Millennium	
6.1 Introduction	105
6.2 Holocene climate variability	107
6.3 Temperatures over the last millennium	110
6.4 Uncertainties in large-scale temperature reconstructions	114
6.5 The Medieval Warm Epoch and the Little Ice Age	115
6.6 20 th century temperatures in perspective	116
6.7 The Tropical Indo-Pacific	118
6.7.1 ENSO variability	118
6.7.2 Century-scale trends in the tropics	120
6.7.3 Tropical variability in the last millennium	120
6.8 Hydroclimatic variability in western North America	122
6.8.1 Tree ring networks	122
6.8.2 Interaction between time scales	123
6.8.3 Extreme and persistent droughts and wet periods	125
6.8.4 Ecosystem impacts of climate variability	125
6.9 North Atlantic region	126
6.10 The Southern Hemisphere	131
6.11 Forcing Factors: causes of temperature change in the last millennium	132
6.11.1 Orbital Forcing	132
6.11.2 Solar variability	133
6.11.3 Volcanic Forcing	134
6.11.4 Internal “forcing” factors	134
6.11.5 Thermohaline circulation changes	134
6.12 Anthropogenic and natural climate forcings over the past millennium: model results	137
6.13 Detecting twentieth century climate change	139
6.14 Concluding Remarks	141
The Role of Human Activities in Past Environmental Change	
7.1 Introduction	143
7.2 Natural and human-induced processes of environmental change	143
7.3 Past human impacts on the atmosphere	144
7.3.1 Greenhouse gases	144
7.3.2 Trace metals, other industrial contaminants and radioisotopes	145
7.4 Paleo-perspectives on acidification, eutrophication and the ecological status of lakes, coastal waters and peatlands	145
7.5 Past human impacts as a result of land-use and land-cover changes	151
7.6 A paleo-perspective on human activity and bio-diversity	154
7.7. Past human impacts on erosion rates, sediment yields and fluvial systems	156
7.8 Environmental sustainability and human vulnerability in the perspective of the paleorecords	158
7.9 Some future research priorities	162
7.10 Acknowledgements	162
Challenges of a Changing Earth: Past Perspectives, Future Concerns	
8.1 Introduction	163
8.2 Understanding earth system variability	163
8.2.1 Paleoclimate data and models	164
8.3 Nonlinear dynamics in the earth system	164
8.3.1 Earth system thresholds	164
8.3.2 Hysteresis	165
8.4 Is the past irrelevant to the future?	166
8.5 Human vulnerability to future climate change	166
Appendix A - The Past Global Changes (PAGES) Program	
A.1 The PAGES mission	169
A.2 Research Program	169

Focus 1 - PANASH	169
Focus 2 - The PAGES/CLIVAR Intersection	169
Focus 3 - IMAGES	170
Focus 4 - Polar Programs	170
Focus 5 - Past Ecosystem Processes and Human Environment Interactions	170
A.3 Initiatives	171
A.4 Program Structure	171
A.5 Links with other international programs	171
A.6 Outreach and Communications	172
A.7 Data Archives	172
A.8 Capacity Building - encouraging North-South research partnerships	172
A.9 How to get involved with PAGES activities	173
Appendix B - The PAGES Data System	
B.1 The PAGES Data System and its components	175
B.2 The World Data Center for Paleoclimatology	175
B.3 The World Data Center for Marine Environmental Sciences / PANGAEA	176
B.4 MEDIAS-France	176
B.5 Mirror sites / World Data Center <i>partners</i>	177
B.6 Data cooperatives and project level data management	177
B.7 Users of paleoclimatic data	177
B.8 Data access and information tools	178
B.9 The PAGES Data Board and data sharing	178
B.10 Future directions	178
