Coral proxy system modeling

Coral proxy system modeling

Sensor model:

$$\delta^{18}\text{O}_{coral} = a_1 \text{SST} + \delta^{18}\text{O}_\text{air} + \varepsilon$$

$$\delta^{18}\text{O}_{coral} = a_1 \text{SST} + a_2 \text{SSS} + \varepsilon$$

(Thompson et al. 2011, 2013)

Observation model:

$$t_i = t_{i-1} - \Delta_i$$

$$\Delta_i = 1 + P_i^\theta$$

(Comboul et al. 2014)

Uncertainties in coral PSMs

Sensor model:

$$\delta^{18}\text{O}_{\text{coral}} = a_1 \text{SST} + \delta^{18}\text{O}_\text{air} + \varepsilon$$

$$\delta^{18}\text{O}_{\text{coral}} = a_1 \text{SST} + a_2 \text{SSS} + \varepsilon$$

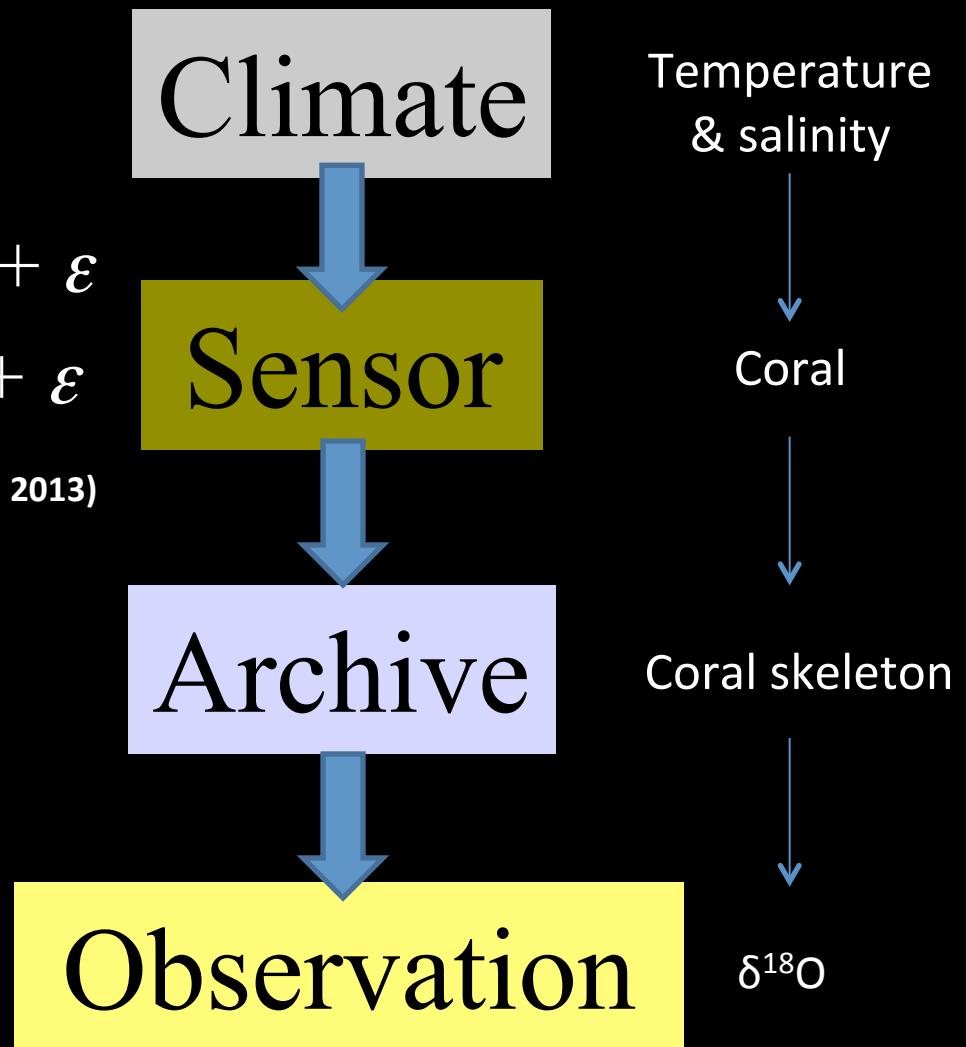

(Thompson et al. 2011, 2013)

Observation model:

$$t_i = t_{i-1} - \Delta_i$$

$$\Delta_i = 1 + P_i^\theta$$

(Comboul et al. 2014)

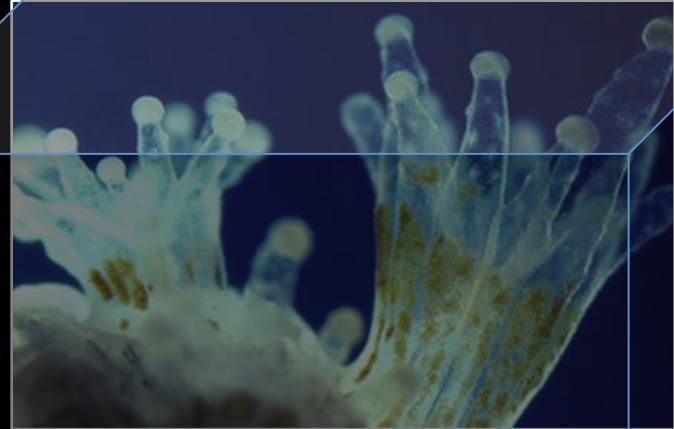

(Evans et al. 2013)

Uncertainty_{obs-synth} =

(Error_{corals}, Error_{forward model}, Error_{input})

- site biases
- chronological errors
- nonlinear response
- approximation of $\delta^{18}\text{O}_{\text{sw}}$ with SSS
- other components?
(e.g., biological response)
- Forcings
- SST/SSS response to forcings

New paired $\delta^{18}\text{O}$ and salinity observations

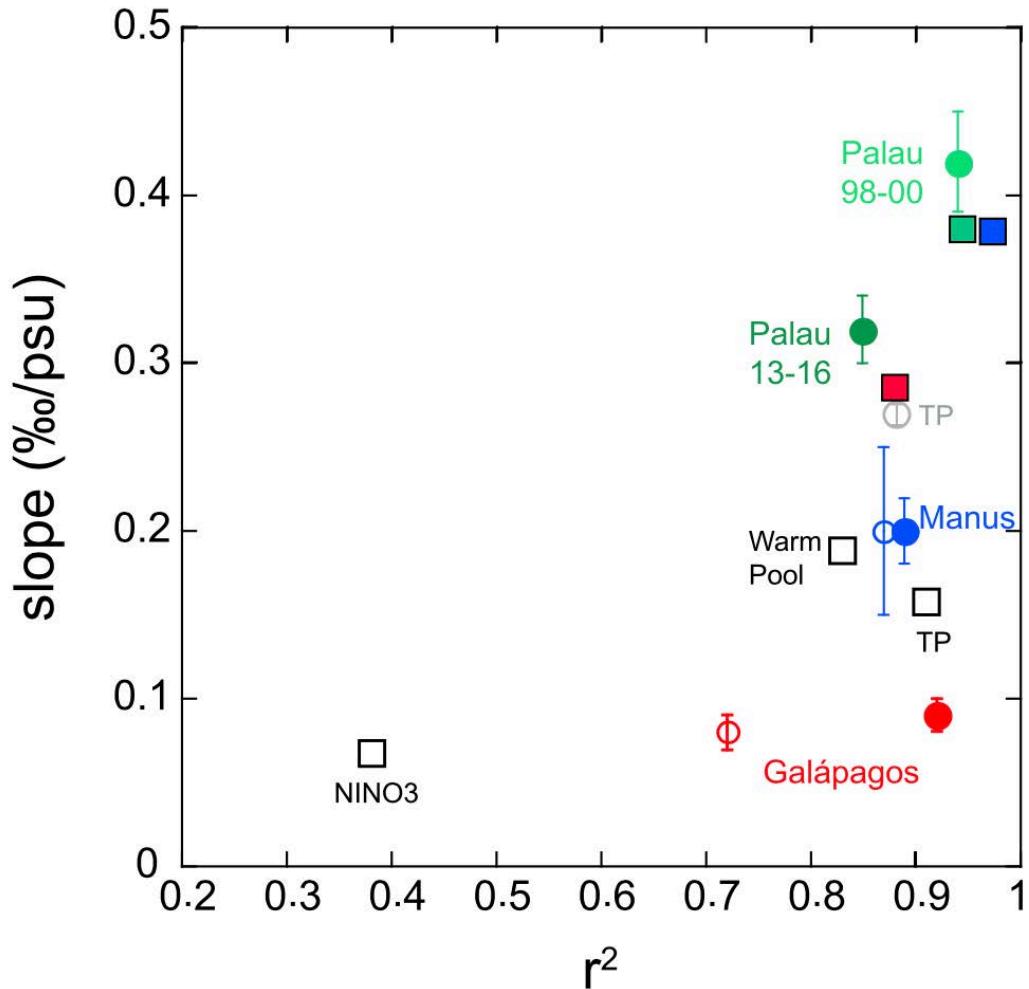

weekly seawater samples, 2012-2015

Spatial & temporal $\delta^{18}\text{O}$ and salinity relationships

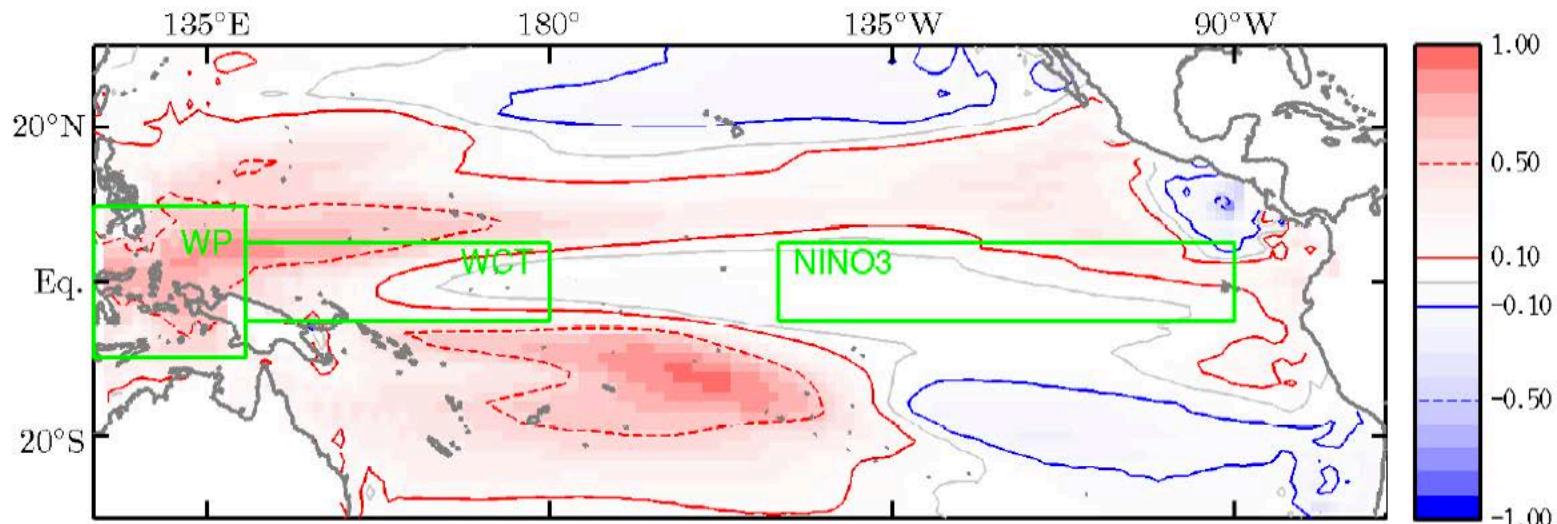

1. Does the $\delta^{18}\text{O}$ -salinity relationship vary across the tropical Pacific?
2. Does the spatial $\delta^{18}\text{O}$ -salinity relationship approximate the temporal $\delta^{18}\text{O}$ -salinity relationship at different sites?

$\delta^{18}\text{O}$ - SSS slope

Impact coral forward modeling?

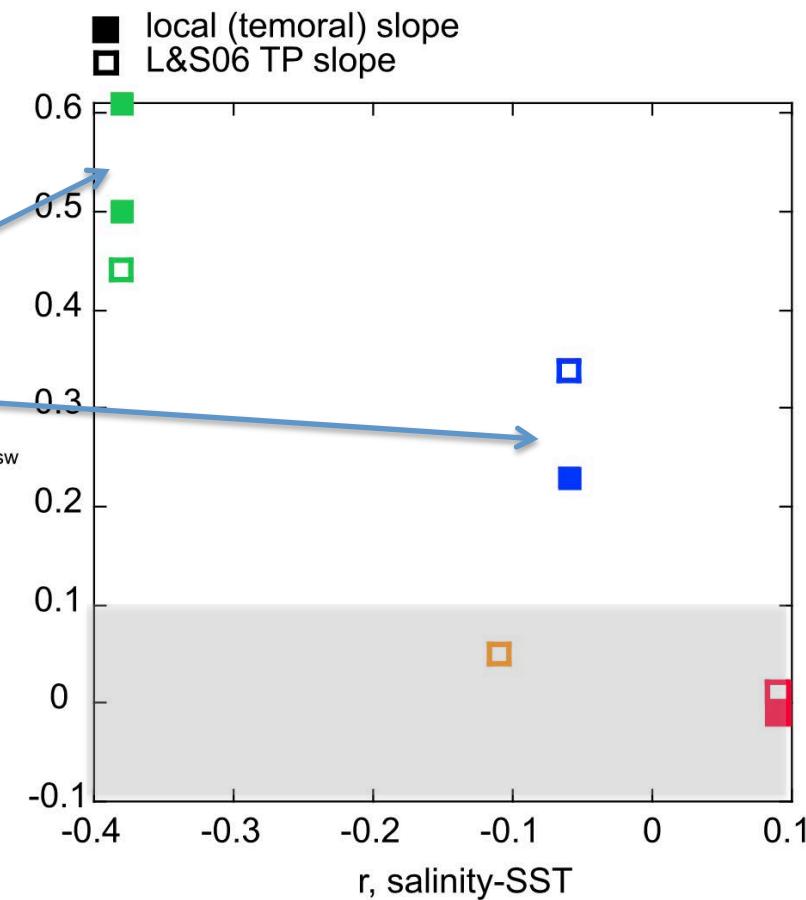

A) F_{sw} , fraction of $\delta^{18}\text{O}_{\text{coral}}$ variance from $\delta^{18}\text{O}_{sw}$

Russon et al. (2013)

Impact coral forward modeling?

$\delta^{18}\text{O}_{\text{sw}}$ contributes constructively to $\delta^{18}\text{O}_{\text{coral}}$ (likely due to covariance)
LOCAL CALIBRATION
NEEDED

$\delta^{18}\text{O}_{\text{sw}}$ does not contributes significantly to $\delta^{18}\text{O}_{\text{coral}}$

Conclusions

- Pseudocoral-coral discrepancies in magnitude of trend and variability
- Simulated $\delta^{18}\text{O}_{\text{sw}}$ /SSS biases and uncertainty in the $\delta^{18}\text{O}_{\text{sw}}$ -SSS relationship likely contribute significantly to these discrepancies in the Western Pacific
- Impact of non-linear, growth-related effects likely minimal for $\delta^{18}\text{O}$ (but may impact Sr/Ca)
